WORLD DEMOLITION SUMMIT 2024

CONFERENCE - AWARDS - NETWORKING

The 2024 World Demolition Summit is planned for 6 & 7 November in Stockholm, Sweden. In its sixteenth year the summit continues to adapt for the audience, sponsors and market in general. Industry professionals attend to discuss best practice, the challenges faced across jobsites and complexities of demolition work.

In addition to the conference, equipment experts are on hand to offer support and update on product launches. The day ends with a dinner and the famous World Demolition Awards ceremony, offering opportunities to socialise, network and find out who the winners are.

6 & 7 November 2024

Stockholm, Sweden

SPONSORSHIP OPPORTUNITY

- Promote your company, brand and expertise to a key group of equipment buyers
- Demonstrate your industry leadership and involvement in the industry
- Brand alignment exposure from May - November
- Alignment with an established, leading demolition event

Event pre-marketing commences in May with:

- Dedicated WDS Newsletter
- Magazine advertisements promoted across KHL titles
- Digital banners promoted across KHL digital media
- Editorial coverage
- Exposure at relevant exhibitions and conferences KHL attends
- Social media coverage

Construction BRIEFING
GLOBAL CONSTRUCTION INSIGHT - EVERY DAY

31 January 2024

London ICR80

The rise of sustainable high-rise buildings

Neil Gerrard

Tall buildings pose a unique challenge to sustainability because they offer both positive and negative environmental impacts. In the plus column, they can reduce urban sprawl and promote alternative transportation. But on the downside, the carbon emissions involved in producing the materials to construct these buildings can be high. Tall buildings have typically been constructed using steel or concrete, but what if there was an alternative that could boost the positive impact of the high-rise? That's the question Caitlin Jones explores in today's Construction Briefing, looking specifically at the sustainability benefits of building high-rise buildings with timber.

Read more about the rise of high-rise sustainable buildings.

From Our Partners

Cummins Fuel-Agnostic Engine Delivers Low-To-Zero Carbon Fuel Capability

Throughout its 103-year history, Cummins has driven advancements in power solution technology. The results of multiple developments can be seen in the wide-ranging portfolio of Cummins products, from advanced diesel engines to hydrogen fuel cells, available for a massive variety of applications.

Cummins' latest fuel-agnostic 15-liter engine platform with hydrogen, natural gas and advanced diesel engines offers low-to-zero carbon fuel capability. It's designed to do one thing - accelerate the decarbonization of heavy-duty applications.

Into the woods: The rise of sustainable high-rise buildings

Caitlin Jones
Deputy Editor, International Construction & Construction Europe

30 January 2024
9:13 AM GMT

Tall buildings pose a unique challenge to sustainability because they offer both positive and negative environmental impacts. Positive impacts include reducing urban sprawl, promoting alternative transportation, and allowing efficient energy use on a district scale. But these benefits come at the cost of emitting more carbon dioxide to produce the required materials and to construct the building.

A tall building's embodied carbon footprint is significantly higher than low-rise buildings on a per-square-foot basis. This is because the structure is usually responsible for the majority of a building's embodied carbon footprint, and tall buildings require more structure to support their height.

Tall buildings have typically been constructed using steel or concrete, but what if there was an alternative that could boost the positive impact of the high-rise?

Architectural and engineering firm Skidmore, Owings & Merrill and researchers from Oregon State University recently launched a research project investigating the performance characteristics of a hybrid wood and concrete structural floor system that may offer the industry a traditional far more construction alternative.
